Ahmed Ali

Frontend Developer · Webflow Specialist · Vibe Coder

SUMMARY

Frontend developer focused on responsive, well-structured interfaces — built by hand, in Webflow, or through AI-assisted workflows depending on what a project actually needs. Comfortable owning a build end to end: clean component structure, API integrations where required, and an on-page SEO pass so the finished site is positioned to rank, not just load fast. Picks up new tools quickly and adapts the process to the deadline rather than the other way around.

EXPERIENCE

Vibe Coder
Jun 2026 – Present

Self-employed, Freelance — Pakistan

- Moved primary workflow to AI-assisted development, prompting and iterating with Claude and Cursor to ship full-stack features in a fraction of the previous timeline.
- Kept hand-written and Webflow delivery available for work that needs precision or CMS handoff, with SEO built in from the first commit.

Web Developer
Sep 2023 – Jun 2026

Self-employed, Freelance — Pakistan

- Built responsive sites in hand-written code and Webflow for small businesses, SaaS landing pages, and personal brands.
- Packaged client work into tiered Webflow offerings — landing page, multi-page CMS site, advanced business site — sold and delivered through Fiverr with clear scope and timelines.
- Ran a technical and on-page SEO pass on every build — keyword strategy, Core Web Vitals fixes, internal linking — before handoff.

PROJECTS

DevicesArena
devicesarena.com

Stack: HTML, CSS, JavaScript, custom backend & auth

- Built a full smartphone review and comparison platform from scratch, hand-coded end to end.
- Shipped a spec-by-spec device compare tool and a phone-finder search across the full device database.
- Implemented custom Google-authenticated accounts and a live news section.

Muse AI — SaaS Landing Page
muse-ai-ahmed.webflow.io

Stack: Webflow, CMS, Interactions

- Designed and built a full AI-tool marketing site in Webflow, hero through footer.
- Added animated stat counters, a tiered pricing table, and a testimonial layout.

Umrah Tours — Travel Agency
umrah-tours.webflow.io

Stack: Webflow CMS, On-Page SEO

- Built a full travel-agency site for Umrah packages with tiered package pages and a guide/blog section.
- Wrote an FAQ around real visa and pricing questions, then ran on-page SEO across every page.

Exam Portal
exam-portal.infinityfreeapp.com

Stack: PHP API, Vibe-coded (Claude/Cursor)

- Shipped a full-stack exam portal with student login and exam delivery, built almost entirely through AI-assisted prompting.
- Added a live "Top Students" leaderboard served through its own PHP API.
